

ENABLE KIOSK MODE ON WINDOWS 11

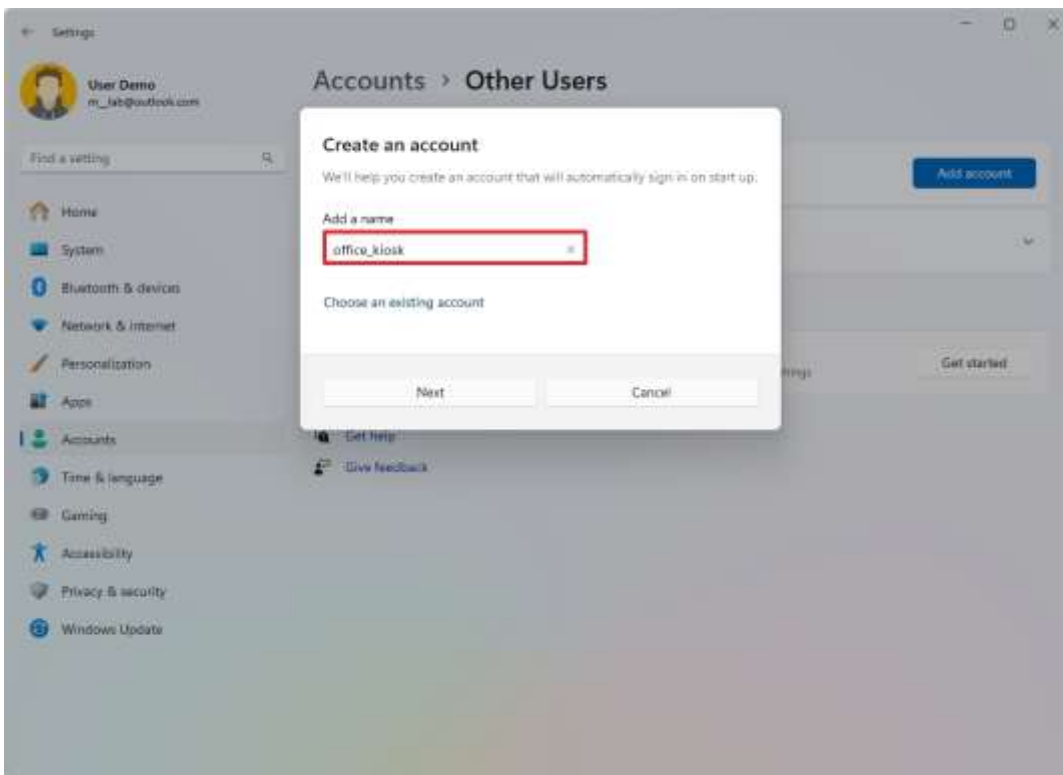

1. Open **Settings**.
2. Click on **Accounts**.
3. Click the **Other users** page on the right side.

4. Click the **Get started** button under the "Set up a kiosk" section.

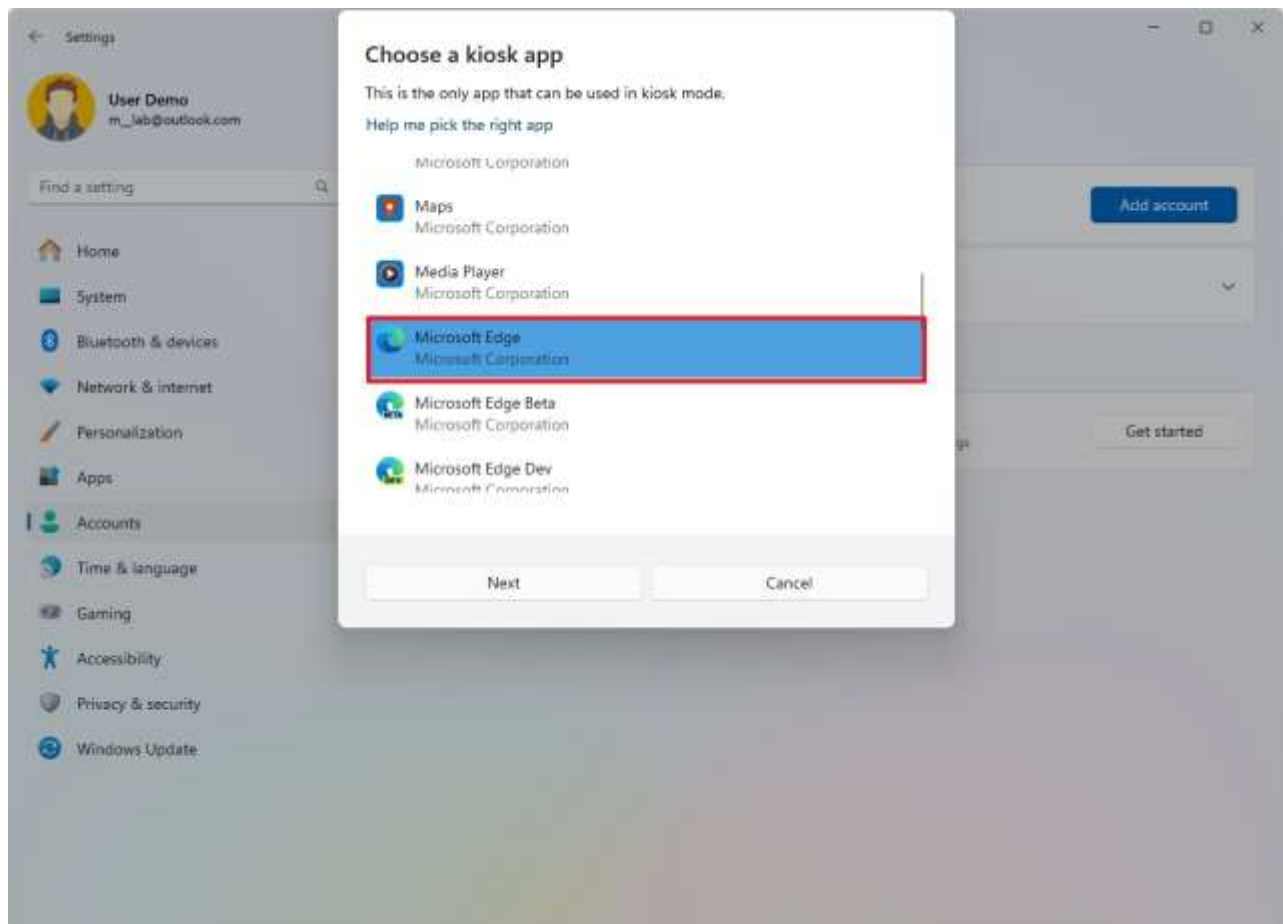

5. Add a name to create a Kiosk profile. For example, **office_kiosk**.

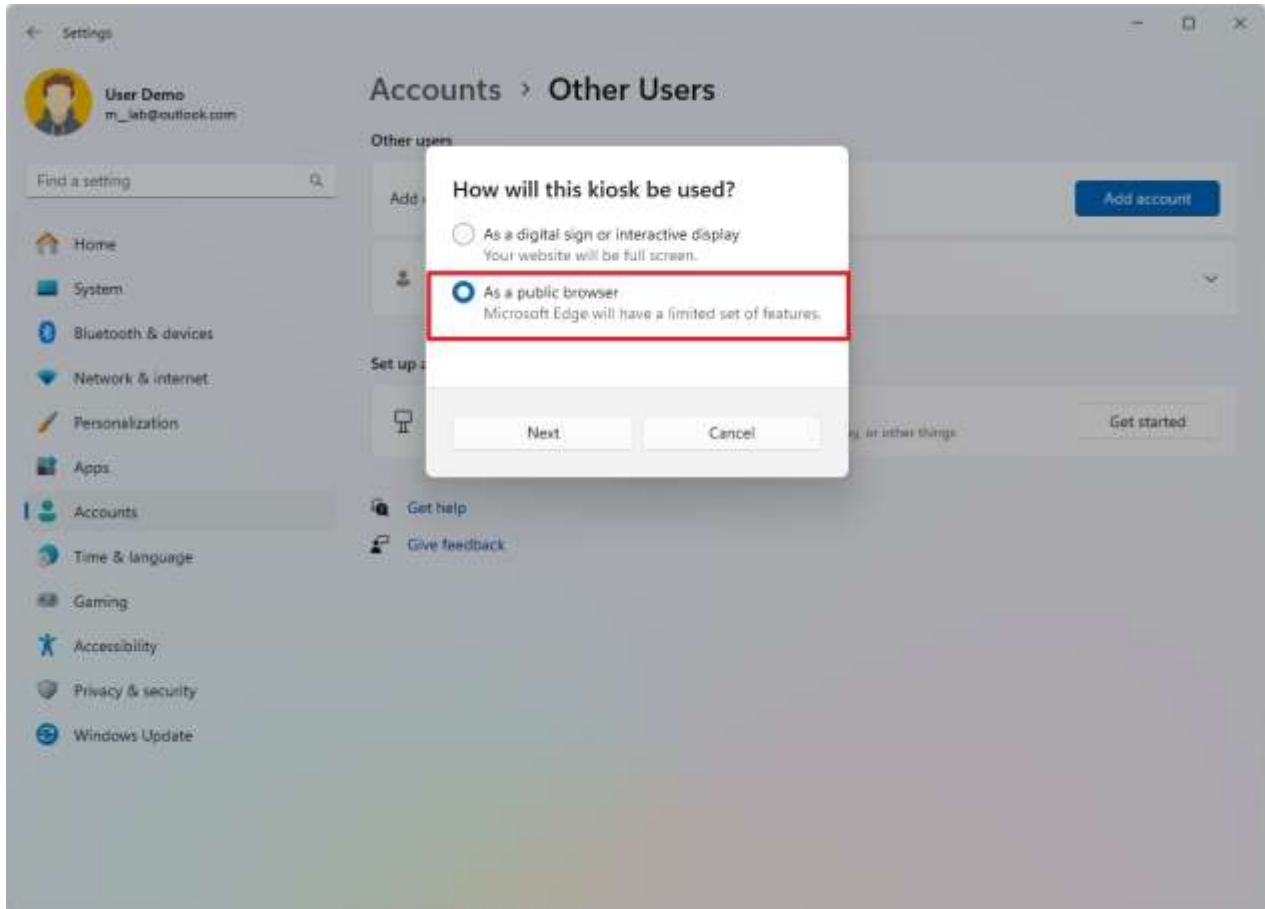

6. Click the **Next** button.

7. Select the app to load in Kiosk mode.

8. Click the **Next** button.
9. Choose how the app will run (if applicable).
 - **Quick note:** This setting will differ depending on the app. In this case, I'm selecting the "**As a public browser**" option because I'm setting up a computer that will be used to browse the internet.

12. Select the minutes of inactivity before restarting the application (if applicable).
13. Click the **Next** button.
14. Click the **Close** button.

Once you complete the steps, sign out of the primary account and sign in with the Kiosk account to load the application.

If you want to exit the session to shut down, restart the device, or sign in with another account, you will need to use the "**Ctrl + Alt + Del**" keyboard shortcut to bring up the options to sign out.
